Handbook of the Life Course
What new theories, evidence, and policies have shaped health economics in the 21st century? Editors Mark Pauly, Thomas McGuire, and Pedro Pita Barros assemble the expertise of leading authorities in this survey of substantive issues. In 16 chapters they cover recent developments in health economics, from medical spending growth to the demand for health care, the markets for pharmaceutical products, the medical workforce, and equity in health and health care. Its global perspective, including an emphasis on low and middle-income countries, will result in the same high citations that made Volume 1 (2000) a foundational text. Presents coherent summaries of major subjects and methodologies, marking important advances and revisions. Serves as a frequently used non-journal reference. Introduces non-economists to the best research in health economics.

The Foundations of Positive and Normative Economics
The Handbook of Deontic Logic and Normative Systems presents a detailed overview of the main lines of research on contemporary deontic logic and related topics. Although building on decades of previous work in the field, it is the first collection to take into account the significant changes in the landscape of deontic logic that have occurred in the past twenty years. These changes have resulted largely, though not entirely, from the interaction of deontic logic with a variety of other fields, including computer science, legal theory, organizational theory, economics, and linguistics. This first volume of the Handbook is divided into three parts, containing nine chapters in all, each written by leading experts in the field. The first part concentrates on historical foundations. The second examines topics of central interest in contemporary deontic logic. The third presents some new logical frameworks that have now become part of the mainstream literature. A second volume of the Handbook is currently in preparation, and there may be a third after that.

Handbook of Assessment in Clinical Gerontology
This collection offers first-hand accounts, research studies and in-depth theoretical explorations of disabled children’s childhoods. The accounts oppose the global imposition of problematic views of disability and childhood and instead, offer an open discussion of responsive and ethical research approaches.

Neuropsychology and the Hispanic Patient Although several books on the administration and scoring procedures for tests are available to neuropsychologists, the Handbook of Normative Data for Neuropsychological Assessment is the first reference to present and critique the available normative data for the most common neuropsychological tests: Trail Making, Color Trails, Stroop, Auditory Consonant Trigrams, Boston Naming, Verbal Fluency Tests, Rey-Osterreith Complex Figure, Rey Auditory Verbal Learning, Hooper Visual Organization Test, Seashore Rhythm, Speech Sounds Perception, Tactile Performance, Finger Tapping, Grip Strength (Dynamometer), Grooved Pegboard, Category Test, and the Wechsler Memory Scale (WMS, WMS-R and WMS III). Informative tables throughout the book guide clinicians to the sets of normative data that are best suited to their needs, depending on the age, sex, educational level, handedness, IQ and ethnicity of their patients, and highlight the advantages associated with using data for comparative purposes. Those using the book have the option of reading the authors' critical review of the normative data for a particular test, or simply turning to the appropriate data.

locatable table for quick test interpretation. This book will be welcomed by practitioners, researchers, teachers and graduate students as a unique and valuable contribution to the practice of neuropsychology. No other volume offers such an effective framework for the critical evaluation of normative data for neuropsychological tests. The authors host a website, www.NormativeData.com, which is a resource site for clinicians and researchers interested in research and normative research. They post corrections to the book, updates of recent normative studies not included in the first edition, and other announcements and links of interest to the neuropsychologist.

Handbook of Behavioural Change and Public Policy This handbook provides a contemporary and research-informed review of the topics essential to clinical psychological assessment and diagnosis. It outlines assessment issues that cross all methods, settings, and disorders, including (but not limited to) psychometric issues, diversity factors, ethical dilemmas, validity of patient presentation, psychological assessment in treatment, and report writing. These themes run throughout the volume as leading researchers summarize the empirical findings and technological advances in their area. With each chapter written by major experts in their respective fields, the text gives interpretative and practical guidance for using psychological measures for assessment and diagnosis.

Handbook of Health Economics Adolescent and child sexuality is studied by developmental psychologists from a research perspective and is of interest to forensic psychologists dealing with abuse and custody issues as well as rape cases. In many cases, it is of interest whether the child in question was sexually active to understand the extent to which an underaged minor might have voluntarily participated in sexual activity as opposed to having been coerced. Previously, researchers interested in the applications of their research needed to look to separate books, and forensic specialists needed to look to developed books to find the information they may have needed. This handbook provides both audiences with the related information they need. Encompasses normative behavior and clinical disorders in one source. Applies the information on development and behavior to forensic issues Provides treatment information on sexual disorders in children Provides information on children and adolescents in one volume

Handbook of Multicultural Mental Health Building on the success of the 2003 Handbook of the Life Course, this second volume identifies future directions for life course research and policy. The introductory essay and the chapters that make up the five sections of this book, show consensus on strategic “next steps” in life course studies. These next steps are explored in detail in each section: Section I, on life course theory, provides fresh perspectives on well-established topics, including cohorts, life stages, and legal and regulatory contexts. It challenges life course scholars to move beyond common individualistic paradigms. Section II highlights changes in major institutional and organizational contexts of the life course. It draws on conceptual advances and recent empirical findings to identify promising avenues for research that illuminate the interplay between structure and agency. It examines trends in family, school, and workplace, as well as contexts as deserve heightened attention, including the military, the criminal justice system, and natural and man-made disaster. The remaining three sections consider advances and suggest strategic opportunities in the study of health and development throughout the life course. They explore methodological innovations, including qualitative and three-generation longitudinal research designs, causal analysis, growth curves, and the study of place. Finally, they show ways to build bridges between life course research and public policy.

Memory Loss, Alzheimer’s Disease, and Dementia E-Book Evidence-based bias reduction in low-inference and high-inference personality assessment instruments is now consensually recognized. Bias in standard psychological tests such as the Minnesota Multiphasic Personality Inventory (MMPI-2), Rorschach (RCS), and Thematic Apperception Test (TAT) has been dramatically reduced. MMPI-2 deficiencies in items, norms, flawed psychometric properties, and construct meanings have been minimized in a restructured MMPI-2-RF. The Rorschach Comprehensive System (RCS) recently incorporated revised diagnostic constructs and a theoretical model of assessment feedback. In addition, the new Rorschach Performance Assessment System (R-PAS) is an evidence-based internationally focused and culturally relevant system using externally accessed behavioral criteria. The TAT now has a reference compendium of objective scores representing a number of systems for both high-inference and low-inference interpretation of this test. The Tell-Me-A-Story test (TEMAS) provides scores and interpretations for cross-cultural and multicultural groups.

Handbook of Computational Social Choice Now presented in full color, this updated edition of Memory Loss, Alzheimer’s Disease, and Dementia is designed as a practical guide for clinicians that delivers the latest treatment approaches and research findings for dementia and related illnesses. Drs. Budin and Solomon — both key leaders in the field — cover the essentials of physical and cognitive examinations and lab findings, and outline the tools you need to consistently make accurate diagnoses in this rapidly growing area. Access in-depth coverage of clinically useful diagnostic tests and the latest treatment approaches. Detailed case studies facilitate the management of both common and uncommon conditions. Comprehensive coverage of hot topics such as chronic traumatic encephalopathy, in addition to new criteria on vascular dementia and vascular cognitive impairment. Includes new National Institute on Aging-Alzheimer’s Association and DSM-5 criteria for Alzheimer’s Disease and Mild Cognitive Impairment. Learn how to use new diagnostic tests, such as the amyloid imaging scans florbetapir (Amyvid), flutemetamol (Vizamyl), and florbetaben (Neuraceq), which can display amyloid plaques in the living brains of patients. Updated case studies, many complete with videos illustrating common tests, clinical signs, and diagnostic features, are now incorporated into the main text as clinical vignettes for all major disorders. Brand-new chapters on how to approach the differential diagnosis and on primary progressive aphasia. Medicine eBook is accessible on a variety of devices.

The Oxford Handbook of The History of Analytic Philosophy By 2010, 15% of the U.S. population will be Hispanic. Neuropsychology and the Hispanic Patient: A Clinical Handbook brings together internationally recognized authorities to address the cultural, methodological, research, and forensic issues that must be considered by neuropsychologists seeking to be maximally effective in their work with members of the fastest-growing American minority group. It includes: * useful assessment decision trees; * summaries of normative data; * descriptions of tests available in Spanish; * extensive HIV and pediatric references; and * numerous charts and illustrations. Reflecting the latest demographic information and covering the developmental spectrum from pediatric to geriatric, this landmark Handbook will become an indispensable reference tool for clinicians and researchers alike.

Encyclopedia of Autism Spectrum Disorders New trends in mental healthcare practice and a rapid increase in the aged population are causing an explosion in the fields of clinical gerontology and geropsychology today. This comprehensive second edition handbook offers clinicians and graduate students clear guidelines and reliable tools for assessing general mental health, cognitive functioning, functional age, psychosocial health, morbidity, behavior deficits, and more. Psychopathology, behavioral disorders, changes in cognition, and changes in everyday functioning are addressed in full, and a wide range of conditions and disorders common to this patient population are covered. Each chapter provides an empirical review of assessment instruments, assessment scales in their totality, a review of how these instruments are used with and adapted for different cultural groups, illustration of assessments through case studies, and information on how to utilize ongoing assessment in treatment and/or treatment planning. This combination will make the volume the definitive assessment source for clinicians working with elderly patients. The most comprehensive source of up-to-date data on gerontological assessment, with review articles covering: psychopathology, behavioral disorders, changes in cognition, and changes in everyday functioning Consolidates broadly distributed literature into single source, saving researchers and clinicians time in obtaining and translating information and improving the level of further research and care they can provide Chapters directly address the range of conditions and disorders most common for this patient population - i.e. driving ability, mental competency, sleep, nutrition, sexual functioning, delirium, elder abuse, depression, anxiety disorders, etc Fully informs readers
regarding conditions most commonly encountered in real world treatment of an elderly patient population Each chapter cites case studies to illustrate assessment techniques Exposes reader to real-world application of each assessment discussed

A Compendium of Neuropsychological Tests Throughout the world as in the United States, psychologists are increasingly being called upon to evaluate clients whose backgrounds differ from their own. It has long been recognized that standard personality and psychopathology assessment instruments carry cultural biases, and in recent years, efforts to correct these biases have accelerated. The Handbook of Cross-Cultural and Multicultural Personality Assessment brings together researchers and practitioners from 7 countries with diverse ethnic and racial identities and training to present state-of-the-art knowledge about how best to minimize cultural biases in the assessment of personality and psychopathology. They consider research methodology, the design and construction of standard objective and projective tests, the use of measures of acculturation, racial identity, and culture-specific tests, the social etiquette of service delivery, and the interpretation of test data for clinical diagnosis. Ranging widely through all the relevant issues, they share a common collective vision of how culturally competent services should be delivered to clients. The Handbook offers the first comprehensive view of a consistent approach to cultural competence in assessment—a necessary precursor of effective intervention. It will become an indispensable reference for all those whose practice or research involves individuals with different ethnic and racial identities.

The SAGE Handbook of Political Science Historically, relatively few investigations in neuropsychology have been sensitive to the analysis of cultural variables. This handbook will assist the neuropsychologist interested in cultural competence and help increase understanding of the link between cultural competence in assessment and intervention and good treatment outcomes. The handbook authors provide an in-depth discussion of the current status of multicultural training in neuropsychology; specific information on diverse groups (age, gender, ethnicity, etc.), assessment instruments, and clinical populations (HIV infected, incarcerated, brain injury, etc.); and unique analyses of the neuropsychological impact of these different variables. This volume is the first to summarize the cultural data available in neuropsychology. A valuable resource for clinical neuropsychologists, school psychologists and rehabilitation professionals.

Handbook of Cross-Cultural Neuropsychology We live in a world of legal pluralism, where a single act or actor is potentially regulated by multiple legal or quasi-legal regimes imposed by state, substate, transnational, supranational and nonstate communities. Navigating these spheres of complex overlapping legal authority is confusing and we cannot expect territorial borders to solve all these problems. At the same time, those hoping to create one universal set of legal rules are also likely to be disappointed by the sheer variety of human communities and interests. Instead, we need an alternative jurisprudence, one that seeks to create or preserve spaces for productive interaction among multiple, overlapping legal systems by developing procedural mechanisms, institutions and practices that aim to manage, without eliminating, the legal pluralism we see around us. Global Legal Pluralism provides a broad synthesis across a variety of legal doctrines and academic disciplines and offers a novel conceptualization of law and globalization.

The Oxford Handbook of Law, Regulation and Technology The Foundations of Positive and Normative Economics: A Handbook is the first book in a new series by Andrew Caplin and Andrew Schotter. There is currently no guide available on the rapidly changing methodological frontiers of the field of economics. Economists have been introducing new theories and new sources of data at a remarkable rate in recent years, and there are widely divergent views both on how productive these expansions have been in the past, and how best to make progress in the future. The speed of these changes has left economists ill at ease, and has created a backlash against new methods. The series will debate these critical issues, allowing proponents of a particular research method to present proposals in a safe yet critical context, with alternatives being clarified. This first volume, written by some of the most prominent researchers in the discipline, reflects the challenges that are opened by new research opportunities. The goal of the current volume and the series it presages, is to formally open a dialogue on methodology. The editors’ conviction is that such a debate will rebound to the benefit of social science in general, and economics in particular. The issues under discussion strike to the very heart of the social scientific enterprise. This work is of tremendous importance to all who are interested in the contributions that academic research can make not only to our scientific understanding, but also to matters of policy.

The Cambridge Handbook of Clinical Assessment and Diagnosis What are the boundary zones between normal aging and Alzheimer's disease (AD)? Are many elderly people whom we regard as normal actually in the early stages of AD? Alzheimer's disease does not develop overnight; the early phases may last for years or even decades. Recently, clinical investigators have identified a transitional condition between normal aging and and very early Alzheimer's disease that they have called mild cognitive impairment, or MCI. This term typically refers to memory impairment beyond what one would expect in individuals of a given age whose other abilities to function in daily life are well preserved. Persons who meet the criteria for mild cognitive impairment carry a risk for progression to Alzheimer's disease in the near future. Though many questions about this condition and its underlying neuropathology remain open, full clinical trials are currently underway worldwide aimed at preventing the progression from MCI to Alzheimer's disease. This book addresses the spectrum of issues involved in mild cognitive impairment, and includes chapters on clinical studies, neuropsychology, neuroimaging, neuropathology, biological markers, diagnostic approaches, and treatment. It is intended for clinicians, researchers, and students interested in aging and cognition, among them neurologists, psychiatrists, geriatricians, and neuropsychologists.

Mild Cognitive Impairment The main stream of academic philosophy, in Anglophone countries and increasingly worldwide, is identified by the name 'analytic.' The study of its history, from the 19th century to the late 20th, has boomed in recent years. These specially commissioned essays by forty leading scholars constitute the most comprehensive book on the subject.

Handbook of Deontic Logic and Normative Systems The role of culture is significant when measuring cognitive abilities during neuropsychological assessments. However, cultural diversity is a frequently overlooked moderating variable. The International Handbook of Cross-Cultural Neuropsychology emphasizes major distinctions among cultural groups in North and South America, Europe, Africa, Asia, and Australia to heighten awareness of nuances, as well as culturally-influenced differences and similarities. The goal of this important handbook is to view assessments and rehabilitation from different perspectives, thereby offering opportunities for increasing knowledge and understanding, while improving clinical skills and laying the groundwork for establishing international and cross-cultural collaborations. Clinical judgment can be colored by previous experiences from different cultures, expectancies of pathology among certain groups, and differences in socioeconomic levels. As clinical experiences increase with people from different cultures, the limitations of neuropsychological tools to make accurate assessments become evident. It is through gaining knowledge about the values of a different culture that neuropsychologists can develop a cross-cultural understanding. Professionals in areas such as neuropsychology, cross-cultural psychology, and social psychology, to name a few, will find the material in this volume to be a stimulating addition to existing literature.

The Routledge Handbook of the Politics of Migration in Europe Although its underlying concept is a relatively simple one—the measurement of the human body and its parts—anthropometry employs a myriad of methods and instruments, and is useful for a variety of purposes, from understanding the impact of disease on individuals to tracking changes in populations over time. The first interdisciplinary reference on the subject, the Handbook of Anthropometry brings this wide-ranging field together: basic theory and highly specialized topics in normal and abnormal anthropology in terms of health, disease prevention,
and intervention. Over 140 self-contained chapters cover up-to-date indices, the latest studies on computerized methods, shape-capturing systems, and bioelectrical impedance, data concerning single tissues and whole-body variables, and reports from different areas of the world. Chapters feature helpful charts and illustrations, cross-references to related chapters are included, and key points are presented in bulleted form for ease of comprehension. Together, the Handbook’s thirteen sections entail all major aspects of anthropometrical practice and research, including: Tools and techniques. Developmental stages, from fetus to elder. Genetic diseases, metabolic diseases, and cancer. Exercise and nutrition. Ethnic, cultural, and geographic populations. Special conditions and circumstances. The Handbook of Anthropometry is an invaluable addition to the reference libraries of a broad spectrum of health professionals, among them health scientists, physicians, physiologists, nutritionists, dieticians, nurses, public health researchers, epidemiologists, exercise physiologists, and physical therapists. It is also useful to college-level students and faculty in the health disciplines, as well as to policymakers and ergonomists.

International Handbook of Cross-Cultural Neuropsychology The variety, pace, and power of technological innovations that have emerged in the 21st Century have been breathtaking. These technological developments, which include advances in networked information and communications, biotechnology, neurotechnology, nanotechnology, robotics, and environmental engineering technology, have raised a number of vital and complex questions. Although these technologies have the potential to generate positive transformation and help address ‘grand societal challenges’, the novelty associated with technological innovations has also been accompanied by their risks and destabilizing effects. Is there a potential harm to human health or the environment? What are the ethical implications? Do these innovations elevate or antagonize values such as human dignity, privacy, democracy, or other norms underpinning existing bodies of law and regulation? These technological developments have therefore spawned a nascent but growing body of ‘law and technology’ scholarship, broadly concerned with exploring the legal, social and ethical dimensions of technological innovation. This handbook collates the many and varied strands of this scholarship, focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors, through which leading scholars in the field interrogate the interfaces between law, emerging technology, and regulation. Structured in five parts, the handbook (I) establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance; (II) explores the relationship between technology development by focusing on core concepts and values which technological developments implicate; (III) studies the challenges for law in responding to the emergence of new technologies, examining how legal norms, doctrine and institutions have been shaped, challenged and destabilized by technology, and even how technologies have been shaped by legal regimes; (IV) provides a critical exploration of the implications of technological innovation, examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development, and the implications of employing new technologies as an instrument of regulatory governance; (V) explores various interfaces between law, regulatory governance, and new technologies across a range of key social domains.

The Oxford Handbook of Political Methodology While the importance of consent has been discussed widely over the last few decades, interest in its study has received renewed attention in recent years, particularly regarding medical treatment, clinical research and sexual acts. The Routledge Handbook of the Ethics of Consent is an outstanding reference source to this exciting subject and the first collection of its kind. Comprising over thirty chapters by a team of international contributors, the Handbook is divided into five main parts: General questions; Normative ethics; Legal theory; Medical ethics; Political philosophy. Within these sections central issues, debates and problems are examined, including: the nature and normative importance of consent, paternalism, exploitation and coercion, privacy, sexual consent, consent and criminal law, informed consent, organ donation, clinical research, and consent theory of political obligation and authority. The Routledge Handbook of the Ethics of Consent is essential reading for students and researchers in moral theory, applied ethics, medical ethics, philosophy of law and political philosophy. This volume will also be very useful for those in related fields, such as political science, law, medicine and social science.

The Routledge Handbook of the Ethics of Consent A guide for constructing and using composite indicators for policy makers, academics, the media and other interested parties. In particular, this handbook is concerned with indicators which compare and rank country performance.

The Asperkid’s (Secret) Book of Social Rules This innovative and thought-provoking Research Handbook explores not only current debates in the area of gender, sexuality and the law but also points the way for future socio-legal research and scholarship. It presents wide-ranging insights and debates from across the globe, including Africa, Asia, Eastern Europe and Australia, with contributions from leading scholars and activists alongside exciting emergent voices.

Research Handbook on Gender, Sexuality and the Law Behavioural change has become a core issue of public policy. Behavioural instruments such as ‘nudging’ apply insights from behavioural economics and behavioural sciences, psychology and neurosciences across a broad range of policy areas. Behavioural insights teams and networks facilitate the global spread of behavioural public policies. Despite an ever-growing amount of literature, research has remained fragmented. This comprehensive Handbook unites interdisciplinary scholarship, with contributions critically assessing the state and direction of behavioural public policies, their normative implications and political consequences.

Neuropsychosocial Assessment The Routledge Handbook of the Politics of Migration in Europe provides a rigorous and critical examination of what is exceptional about the European politics of migration and the study of it. Crucially, this book goes beyond the study of the politics of migration in the handful of Western European countries to showcase a European approach to the study of migration politics, inclusive of tendencies in all geographical parts of Europe (including Eastern Europe, the Western Balkans, Turkey) and of influences of the European Union (EU) on countries in Europe and beyond. Each expert chapter reviews the state of the art field of studies on a given topic or question in Europe as a continent while highlighting any dimensions in scholarly debates that are uniquely European. Thematically organised, it permits analytically fruitful comparisons across various geographical entities within Europe and broadens the focus on European immigration policies and politics beyond the traditional limitations of Western European, immigrant-receiving societies. The Routledge Handbook of the Politics of Migration in Europe will be essential reading and an authoritative reference for scholars, students, researchers and practitioners involved in, and actively concerned about, research on migration, and European and EU Politics.

Handbook on Health Inequality Monitoring This book provides thorough descriptions of a wide range of neuropsychological tests that are commonly used to assess general intellectual ability; language; visual, auditory, and tactile ability; motor skill; and personality, as well as for a number of lesser known tests which have not been formally published. Among the tests discussed are such widely used instruments as the Stanford-Binet, MMPI, PASAT, and Purdue Pegboard. Instructions for administration, approximate time for administration, scoring procedures, sample score sheets, normative data, and information on reliability and validity are presented. The authors also discuss when a given test may be of particular use and emphasize clinically useful means for making inferences about the functional integrity of brain regions. A very practical resource, the book will help clinicians select appropriate tests for the evaluation and treatment of neuropsychological disorders. It will also alert clinicians and researchers to ethical and other dimensions in all neurological and neuropsychological research.

Handbook of Normative Data for Neuropsychological Assessment This volume tackles a quickly-evolving field of inquiry, mapping the existing discourse as part of a general attempt to place current developments in historical context; at the same time, breaking new ground in taking on novel subjects and pursuing fresh approaches. The term ‘A.I.’ is used to refer to a broad range of phenomena, from...
machine learning and data mining to artificial general intelligence. The recent advent of more sophisticated AI systems, which function with partial or full autonomy and are capable of tasks which require learning and 'intelligence', presents difficult ethical questions, and has drawn concerns from many quarters about individual and societal welfare, democratic decision-making, moral agency, and the prevention of harm. This work ranges from explorations of normative constraints on specific applications of machine learning algorithms today—in everyday medical practice, for instance—to reflections on the (potential) status of AI as a form of consciousness with attendant rights and duties and, more generally still, on the conceptual terms and frameworks necessarily to understand tasks requiring intelligence, whether "human" or "A.I."

Handbook of Cross-Cultural and Multicultural Personality Assessment Tallinn Manual 2.0 expands on the highly influential first edition by extending its coverage of the international law governing cyber operations to peacetime legal regimes. The product of a three-year follow-on project by a new group of twenty renowned international law experts, it addresses such topics as sovereignty, state responsibility, human rights, and the law of air, space, and the sea. Tallinn Manual 2.0 identifies 154 'black letter' rules governing cyber operations and provides extensive commentary on each rule. Although Tallinn Manual 2.0 represents the views of the experts in their personal capacity, the project benefitted from the unofficial input of many states and over fifty peer reviewers.

Handbook on Constructing Composite Indicators: Methodology and User Guide The SAGE Handbook of Political Science presents a major retrospective and prospective overview of the discipline. Comprising three volumes of contributions from expert authors from around the world, the handbook aims to frame, assess and synthesize research in the field, helping to define and identify its current and future developments. It does so from a truly global and cross-area perspective. Chapters cover a broad range of aspects, from providing a general introduction to exploring important subfields within the discipline. Each chapter is designed to provide a state-of-the-art and comprehensive overview of the topic by incorporating cross-cutting global, interdisciplinarity, and, where this applies, gender perspectives. The Handbook is arranged over seven core thematic sections: Part 1: Political Theory Part 2: Methods Part 3: Political Sociology Part 4: Comparative Politics Part 5: Public Policies and Administration Part 6: International Relations Part 7: Major Challenges for Politics and Political Science in the 21st Century

Handbook of Normative Data for Neuropsychological Assessment Being a teen or tween isn't easy for anyone but it can be especially tough for Asperkids. Jennifer O'Toole knows; she was one! This book is a top secret guide to all of the hidden social rules in life that often seem strange and confusing to young people with Asperger syndrome. The Asperkid's (Secret) Book of Social Rules offers witty and wise insights into baffling social codes such as making and keeping friends, blending in versus standing out from the crowd, and common conversation pitfalls. Chock full of illustrations, logical explanations, and comic strip practice sessions, this is the handbook that every adult Aspie wishes they'd had growing up. Ideal for all 10-17 year olds with Asperger syndrome, this book provides inside information on over thirty social rules in bite-sized chunks that older children will enjoy, understand, and most importantly use daily to navigate the mysterious world around them.

The Cambridge Handbook of Consumer Privacy Businesses are rushing to collect personal data to fuel surging demand. Data enthusiasts claim personal information that's obtained from the commercial internet, including mobile platforms, social networks, cloud computing, and connected devices, will unlock path-breaking innovation, including advanced data security. By contrast, regulators and activists contend that corporate data practices too often disempower consumers by creating privacy harms and related problems. As the Internet of Things matures and facial recognition, predictive analytics, big data, and wearable tracking grow in power, scale, and scope, a controversial ecosystem will exacerbate the acrimony over commercial data capture and analysis. The only productive way forward is to get a grip on the key problems right now and change the conversation. That's exactly what Jules Polonetsky, Omer Tene, and Evan Selinger do. They bring together diverse views from leading academics, business leaders, and policymakers to discuss the opportunities and challenges of the new data economy.

Encyclopedia of Clinical Neuropsychology This reference book presents and critiques normative data for 26 commonly used neuropsychological tests. Locator tables throughout the book guide clinicians to the sets of normative data that are best suited to their needs, depending on the demographic characteristics of their patients. Chapters in the second edition have been updated and revised, and 15 new tests have been reviewed. The way the data are presented has been changed to make the book easier to use. Meta-analytic tables of predicted values for different ages (and education, where relevant) are included for nine tests that have a sufficient number of homogeneous datasets. No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests. Like the first edition, the new edition will be welcomed by practitioners, researchers, teachers, and graduate students as a unique and valuable contribution to the practice of neuropsychology.

Handbook of Child and Adolescent Sexuality The rapidly growing field of computational social choice, at the intersection of computer science and economics, deals with the computational aspects of collective decision making. This handbook, written by thirty-six prominent members of the computational social choice community, covers the field comprehensively. Chapters devoted to each of the field's major themes offer detailed introductions. Topics include voting theory (such as the computational complexity of winner determination and manipulation in elections), fair allocation (such as algorithms for dividing divisible and indivisible goods), coalition formation (such as matching and hedonic games), and many more. Graduate students, researchers, and professionals in computer science, economics, mathematics, political science, and philosophy will benefit from this accessible and self-contained book.
